Electrical Maintenance

Quality Responsive and Planned maintenance

With 7 years experience in handling electrical maintenance for local authorities and prime contractors we have developed a robust and quality driven division dedicated to responsive and planned maintenance.

Key operational centres are developed and teams are built around the clients requirements.

Our internal processes have been built around providing transparent and 'just-in-time' information systems with our web enabled job system allowing clients to view the progress of jobs.

The maintenance division handles in excess of 3000 jobs per month across London and the South East.

The key to our success is in the people we employ. As obvious as this may seem, it is our engineers that are 'client facing' and therefore their representation of the company is one of the main reasons for our success.

We encourage a strong team work ethic.

Design, Install & Commission

Solutions for Top End Residential, Industrial & Commercial

The projects division has particular experience in the design and installation of decorative lighting, power distribution, fire detection and CCTV for shopping centres, retail units, offices, industrial developments and high end residential properties.

We are experienced in working in diverse multi-company environments where the ability to work alongside other professionals and trades is essential in ensuring that projects of any size are completed to the satisfaction of the client.

Bespoke designs using the latest technology can be provided or we can work alongside architects, as an example, to develop existing drawings.

Whatever the requirement, we are confident of our technical ability, dedication and commitment to completing projects to the satisfaction of our clients.

Training & Development

Staff development is crucial to success

We strongly believe that learning is a never ending cycle.

With the world developing at an ever increasing pace, the need to keep up-to-date with current practices, regulations and provide training for future development has never been greater. As such, we invest in the training and development of all company employees.

ECS (Electro-technical Certification Scheme) certification has been attained by all engineers

We have partnered contractors to develop local community initiatives that include workshops in the local community and we have even employed, provided training and financial support to a chosen few who want a career as electricians.

Our development and retention of apprentices is testimony to how we like to invest in the long term.

Financial

A strong company to do with business with

LAGI was incorporated in 1999 and has now grown to a business with an annual turnover in excess of £4m.

More importantly, our margins have remained consistent during this period partly due to our continuous monitoring and improvement initiatives.

Our supplier base means that we can obtain the best prices allowing the savings to be passed further down the supply chain.

We operate the company as two distinct divisions, enabling greater transparency of the cost drivers for the two different, but complimenting areas of operation.

Our strength means that our clients can be confident in us.

Quality Assurance

Quality is the name of the game

We have adopted a continuous quality check and reporting methodology ensuring that our job satisfaction levels remain above 99.5% - *this figure has been determined by our clients not us!*

Our quality supervisors (QS) are responsible for ensuring that adequate safety and quality checks are carried out. Each QS is approved by the (National Inspection Council for Electrical Installation Contracting (NICEIC).

As well as being an approved NICEIC contractor we are also Exor Management Gold Accredited, members of the British Safety Council and the Housing Maintenance Contractors Forum (HMCF).

We take the quality of our work and service seriously.

Examples of how we pledge our support to the community:

Estate Lighting

Problem estate lighting design and installation for increased security

First Start

Assisting in the First Start (with Kier Building Maintenance) program to help young under privileged trainees

E.A.S.E Project

Fully electrically furnished office for computer literacy training

Vandal Proofing

Designing & installing vandal proof lighting cages for problem estates
